Question: When I try to compile a program, it fails with the following error.

fatal error: ncursesw/ncurses.h: No such file or directory
#include

How can I fix this error on [insert your Linux distro]?

`ncursesw/ncurses.h` is a development header file for `ncursesw`, which is source-compatible with `ncurses` library, but supports wide characters or Unicode (UTF8). The compile error implies that the development header files and libraries for `ncursesw` are not installed on your Linux system.

To fix this error, you need to install the development library for `ncursesw` as follows.

On Debian, Ubuntu or Linux Mint:

```
$ sudo apt-get install libncursesw5-dev
```

On CentOS, Fedora or RHEL:

```
$ sudo yum install ncurses-devel
```
